Note: The map shows the known locations of coronavirus cases by county. For total cases and deaths: Circles are sized by the number of people there who have tested positive, which may differ from where they contracted the illness. For new cases: Doubling time is calculated for the last week of cases. Sources: State and local health agencies and hospitals.

Notes: Growth rate shows how frequently the number of cases has doubled over the previous seven days. Growth rate not shown for counties with less than 20 cases.

Then he announced a plan to help them: The federal coronavirus relief package does not include aid for undocumented immigrants. So Mr. Newsom said the state would step in with \$75 million, plus another \$50 million from philanthropic organizations, to be paid to affected families who are undocumented.

Mr. Newsom also signed an order aimed at gig economy workers in a move that could set up a clash with Washington.

Current statewide order in California

Stay at home, effective March 19. California, America's most populous state, was the first to order all residents to stay home. Others quickly followed suit. "This is not a permanent state, this is a moment in time," Gov. Gavin Newsom said. "We will look back at these decisions as pivotal."

What You Can Do

Experts' understanding of how the virus spreads is still limited, but there are four factors that most likely play a role: how close you get; how long you are near the person; whether that person projects viral droplets on you; and how much you touch your face.

If your community is affected, you can help reduce your risk and do your part to protect others by following some basic steps:

- **Wash your hands!** Scrub with soap and water for at least 20 seconds, and then dry them with a clean towel or let them air dry.
- **Keep distance from sick people.** Try to stay six feet away from anybody showing flu- or cold-like symptoms, and don't go to work if you're sick.
- **Prepare your family, and communicate your plan about evacuations, resources and supplies.** Experts suggest stocking at least a 30-day supply of any needed prescriptions. Consider doing the same for food staples, laundry detergent and diapers, if you have small children.

Here's a complete guide on how you can prepare for the coronavirus outbreak.

Note: Data are based on reports by states and counties at the time of publication. Local governments may revise reported numbers as they get new information. Some deaths may be reported by officials in two different jurisdictions. When possible, deaths have been reported here in the jurisdiction where the death occurred. Read more about this data here. While the first known case in the United States was announced on Jan. 21, charts show cases since Feb. 26, when American public health officials first identified community transmission of the virus.

*Cases in New York City and Kansas City, Mo., both of which span several counties, are grouped together. Cases in a state that have been reported without a specific county are listed

as county “unknown.”
